Economics Scaling and root planing, also known as conventional periodontal therapy, non-surgical periodontal therapy, or deep cleaning, is a procedure involving removal of dental plaque and calculus and then smoothing, or planing, of the surfaces of the roots, removing cementum or dentine that is impregnated with calculus, toxins, or microorganisms, the etiologic agents that cause inflammation. This helps to establish a periodontium that is in remission of periodontal disease. Scaling and root planing is performed by a dentist or a periodontist (gum disease specialist). They may use hand instruments called scalers or curettes, similar to those used by hygienists, or they may use ultrasonic tools. The process takes longer and is more invasive than normal teeth cleaning so it may be performed in multiple visits.
